Clean and Maintain Your Stainless Investment

Our stainless steel cleaning kit will help you maintain and care for your Willoughby stainless steel plumbing fixtures so they will last a lifetime.

- Easily cleans grime and stains
- Remove scuffs and minor scratches
- Polishes, preserves, and protects your investment!
- **Ordering part number 980181**

Scotch-Brite® cleaning pads

Note: Always polish with the grain when using the cleaning kit.

Protect Your Investment

Avoid contact with mild steel and **DO NOT** use bleach, any chlorine-based products, or caustic acids on stainless steel fixtures. These products will cause severe damage, including rusting and pitting, and will void the warranty. The corrosion in the image to the right is likely the result of contaminants that fell into the fixture during the construction phase of the project. Particles of mild steel that are introduced into the water in the fixture will rust and cause the stainless steel to corrode. The longer the particles remain in the fixture, the more severe the corrosion.

The fixture must be protected during the construction phase and cleaned immediately upon contact with any contaminants. Cleaning the interior of the bowl or sink with a fiber pad (like a 3M Scotchbrite) is recommended. **DO NOT** use mild steel (wool) scouring pads. Some areas which may be deeply pitted can not be restored using this method. It is important to regularly clean the fixtures using a mild detergent and water. **DO NOT** use bleach or any chlorine-based products. **DO NOT** let standing water or organic matter accumulate in the bowl without fixture being in use or **the warranty is void**. Chlorinated water left standing in the bowl for long periods of time will cause surface rusting. For more information, search the web for "Stainless Steel and Rust."
